

Voice 2 Email

Connect your voice to the Inbox

Email is one of the most common and spread communication tools worldwide. Nevertheless, access to it can still be an issue when it comes to using email from mobile devices. Costly devices and data connections still prove a barrier to the wide adoption of this so useful service.

Almira Labs creates services that can be accessed through the Voice Channel, this is the universal and ubiquitous channel present in all telephony devices, either fixed or mobile in the market. And Voice2Email is the service created to address this market need.

How it works

Voice2email connects your phone number to one or multiple email addresses through a simple configuring process. One configures, users perform a regular phone call and leave a message, which will be attached to an email as an MP3 file that will be sent to the predefined list of emails. Fast, simple, convenient and with all the extra richness that voice offers over written text. As an option, voice messages can be translated into text opening loads of new uses.

Multiple use cases to save time and money

Send yourself quick voice notes and reminders, tell your team how a particular meeting went while on the go, do not text and drive just send voice mails to be productive even while driving, send your customers voice-enhanced emails with offers... limit for uses is the imagination...

Forget about hassles like typing, connecting your laptop, depend on your internet connectivity...

Accessible to all devices, all people

Voice2email is a service that is accessed from both mobile and landline phones. It can be used with any device available on the market, as it uses the regular Voice Channel. In other words, enjoy the advantages of Voice2email regardless of your phone's capabilities or having or not an expensive data connection. And like every service made by Almira Labs no downloads or Internet service are required to use it.

That simplicity brings one of the main features of the service. Its accessibility. Elderly people, disabled people like blind individuals can access to the service with no special adaptations. Just using a voice call as any other individual would do. Is there anything more accessible than that?

Services features at a glance

- Leave a voice message when you need to communicate something important but a call is not convenient for the receiver.
- Record your voice email once and reach multiple contacts
- Save relevant information and store it in your email address where you can properly manage it.
- Listen to them wherever and as many times as you want.
- Hands-free. You can send your voice emails, anywhere, while driving or from certain places where data service may not be available.
- No smartphones required. You can send your contacts a voice email from any phone, including a landline phone.

Voice2email as a value added voice-based service

Operators are constantly facing the decline of revenues that come from voice-based services. Voice2email is a value added service that allows you to address both your corporate clients and end users and, most importantly, it becomes a way of getting more revenues and increase ARPU.

Voice2email is also a service to target any type of phone user, ranging from smartphone users, usually technical savvy to users of the so called "simple phones" that can have additional functionality regardless of their device.

About Almira Labs

Almira Labs is a highly innovative telecom software company focused on providing solutions for wire-line and wireless telecom operators. Through an extensive R&D effort, Almira Labs tools allow fast and low-cost development of Value Added Services for the NGIN with an approach that is unique in the marketplace.

Using this technological base, Almira Labs offers CSPs a broad catalogue of new services that deliver rich communications experiences to multiple user communities through innovative video, voice and media broadcast technology. Besides, services are device independent, thus operators can now reach the whole subscriber base regardless of their technological ability or expenditure level. Almira Labs helps Telecom Operators to generate new recurring revenue streams with a very low investment, in the shape of a Network Application Store as a weapon to fight fierce competition from Device-centric applications stores like the Apple or Android ones.
